Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 2-9, drawn to a moveable platform assembly, classified in class 271, subclass 147.
 - II. Claims 10-12 and 28, drawn to method of sequentially moving a plurality of stacks, classified in class 414, subclass 798.1, or class 271, subclass 158.
 - III. Claims 13-19, drawn to a mailpiece feeder assembly, classified in class 414, subclass 796.9.
 - IV. Claims 20 and 21, drawn to method of moving a mailpiece from a stack of mailpieces, classified in class 414, subclass 797.8.
 - V. Claims 22-26, drawn to an apparatus for moving mailpieces from a stack of mail pieces to a predetermined location, classified in class 414, subclass 796.5.
 - VI. Claim 27, drawn to method for moving mailpieces, classified in class 414, subclass 800.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II, IV, VI and I, III, V are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process of moving mailpieces could be practiced

by another materially different apparatus. For example, the process as claimed could be used by an apparatus that uses conveyor picker, conveyor gripper, and gear driven support platforms.

3. Inventions V and I, V and III, VI and II, VI and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombinations as claimed because the claimed combination does not require the specific details of the subcombinations for patentability. The subcombinations have separate utilities such as for use in a sheet feeding apparatus of a copying machine or printing machine.

4. Inventions I and III, II and IV, are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I and III have separate utility such as for use in a stack handling apparatus without an article separator or feeder. See MPEP § 806.05(d).

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
